

# HIGH DENSITY CONNECTORS

## NANO-D PITCH

As the need for increased miniaturisation is becoming ever greater, AXON' has developed an ultra-high density solution within the existing micro connector size. By putting nano contacts and nano pitch spacing into an existing micro shell, extremely compact connectors with very high pin counts can be produced in circular, rectangular, plastic and metal forms.

Optimal cabling density is achieved in a rectangular ultra high density connector made with Nano-D contacts and spacing inside a standard Micro-D shell size. Such a connector can accommodate a very large amount of pins while retaining excellent Micro-D reliability.

Most electrical and environmental performances are comparable to those of standard Nano-D connectors (250VAC, 200°C), combined with the robustness and shielding efficiency of the Micro-D metal shell.

This same process can be applied to most of the standard and special Micro-D range, making it possible to have ultra high density versions of PCB connectors, wide flange versions, circular, rectangular and combo style versions- with a mix of Micro-D and Nano-D contacts.

## ► Special products

AXON' can develop on request special high density micro-D connectors based on all the standard shell sizes from 9 to 100 positions, or based on special shells such as the 120-position version or other custom configurations.

### ► SMT CONNECTORS

High density connectors can also be available in SMT versions from 28 to 86 ways.
